

SMART CLOTHING STORE

Have you faced these problems?

- Spend **too much time** in trying out clothes.

- Don't know **which size** is right for you.

Can't make
decision

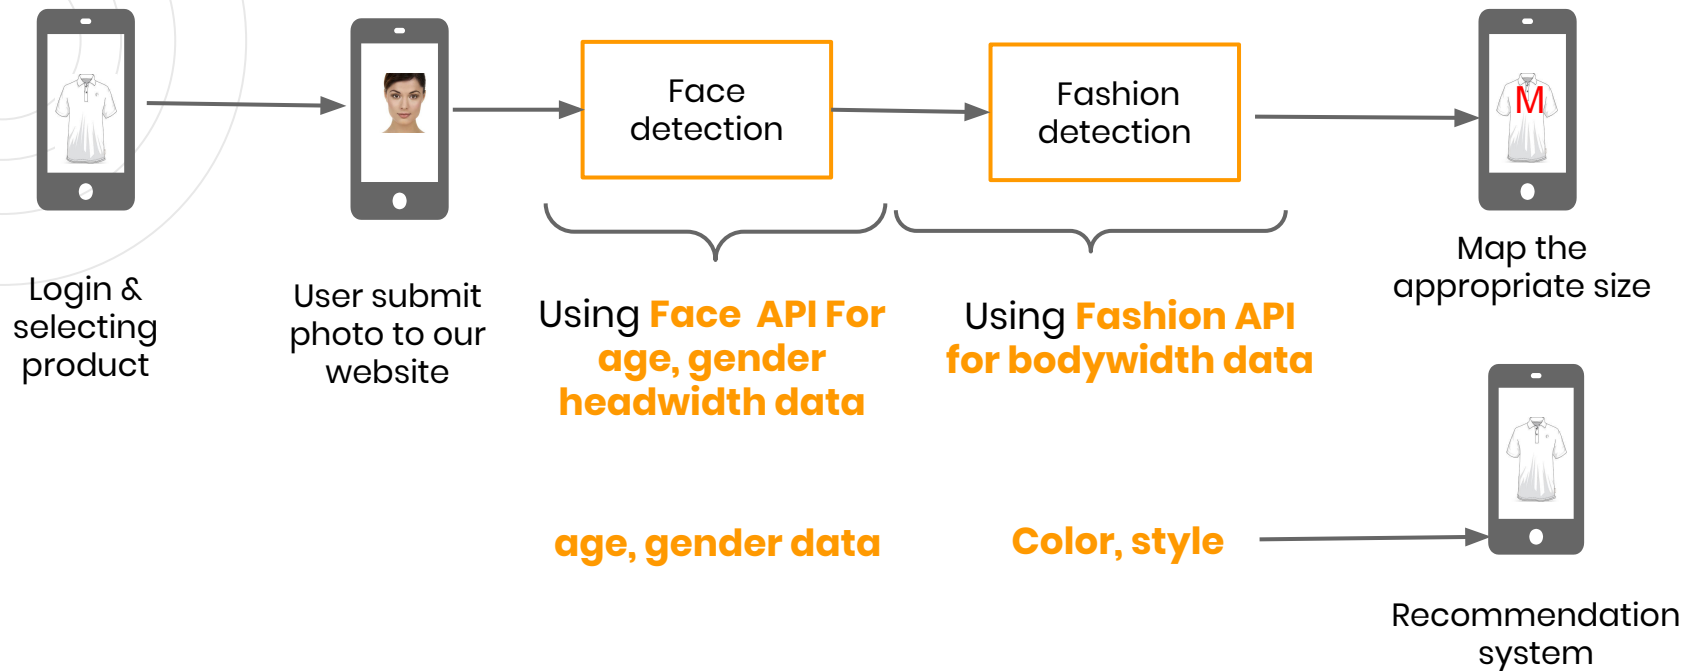

SMART CLOTHING STORE

Clothing store is one of the growing field . we have to treat our customer in the way that they will definitely feel satisfied. Why not automate them using technology to make customer life easier?

What do we do?

- Provide an **size measurement and product recommendation** application for customers.
-
- Make decision **easier and faster** process.
-
- Improve customer **satisfaction**

ML Model

Using **Face API** For
Collecting age,
gender ,emotion data

Benefit to **Business**

- Reduce refund/exchange rate for wrong size product.
- Find the best solution in selecting products to be showed in your store.
- Owner can use all data from APIs to analyze and adjust their business model.

Benefit to **Customer**

- Customers do not need to go to the actual store to try their size.
- Help customer find product that suit them the most.
