

# **HI EVERYONE!**

**From Team Just For Fun =)**

What's wrong with our current  
retail system(Mall Industry)?

# Problem #1

Parking Time

Customers spend too much time to find parking space.

# Problem#2

## **Fashion recognition difficulty**

Customers face difficulties in searching for fashion outlets that suit their style.

# SHOP RANGER

Your solution to all these  
problems

# How do we solve them?

For problem#1:

Shop Ranger provides a parking reservation system.

Uses the customer's license plate number as verification . It also uses the License Plate Recognition API and allows customers to reserve parking.

# How do we solve them?

As for problem#2,

We categorized fashion outlet in the malls with their respective styles.

Using the Fashion API, we provide shop outlet recommendations based on their desired fashion styles as long as a analysable photo is provided.

Good Day!

What do you want to do today?

28°C

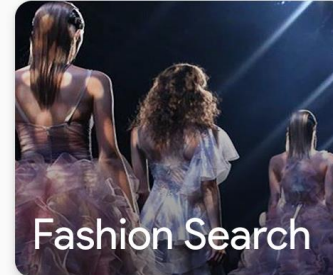

Looks like it's a shopping day!
